A Global Conversation: Transforming Telecare (Spanish Edition): A deep-dive into preventative, proactive and data-driven & predictive care.

In this international webinar, we had the opportunity to discover how Tunstall Spain's person-centred, preventative telecare model is transforming support for older and vulnerable people — helping them live healthier, independent lives at home.

Key themes from the conversation included:

- **Panel Discussions:** Featuring experts from Madrid City Council, Barcelona Provincial Council, Castile-La Mancha Government and Region of Murcia Government.
- **Spanish Best Practices:** innovative strategies in telecare
- **Addressing Key Challenges:** Rural support, loneliness, dependency, and youth disability care
- **Future of Predictive Telecare:** what's next in data-led care solutions

We would like to take this opportunity to thank everyone involved in the event, from our expert panellists to everyone who took the time to join us on the webinar. We look forward to continuing the global conversation with you!
